

Upload Resume action triggers “Upload Candidates Resume” Workflow which uploads resume to s3 bucket and new entry is created.

New resume id created triggers “Resume Parser Agent Workflow” which extract the candidate details and create new candidate against job id resume uploaded.

As soon as new candidate is created it triggers “Scoring Agent Workflow” which takes candidate details and job details parallelly, do the analysis and generates scoring with strength, gaps and overall assessment.

Once candidate is marked shortlist “Send email to shortlisted candidate” workflow triggers and send email to shortlisted candidate.

On interview schedule “schedule interview workflow” triggers and sends invites to candidate.
